

Good to Grow!

kaBLOOM!

Mobile Hydroponic Trailers

WHILE OTHERS ARE BUILDING, **YOU ARE GROWING.**

Sold exclusively at weGrow, these mobile hydroponic trailers are a turnkey solution for cultivators. The kaBloom! comes in 3 different models ranging from 28' to 53' and has separate compartmentalized options for mothering, cloning, vegetating, flowering and drying your plants. The largest model houses up to 32 x 1000 watt HPS lights and 16 grow trays, allowing experienced growers to cultivate 45 pounds of finished product in just **ONE** harvest cycle.

In a business where money does grow on trees, timing is everything. With our mobile hydroponic trailers, while others will be building their grow room you can be growing. Typical start-up time only takes a few hours. The kaBloom! models have also been designed to minimize the human margin of error, ensuring that you get bigger yields and reducing your chances of failure. A kaBloom! can give you **FASTER** harvests, **BIGGER** yields, and the **FLEXIBILITY** of taking your grow room wherever you go.

**Possible 53' yield:
45+ LBS per cycle**
